Employment History

Software Engineer at JumpCloud, Louisville

November 2022 — Present

Software company that provides an open directory platform that allows its customers to manage their technology stack across identity, access and device management. The company has a presence in over 160 countries, with 5 global offices across the world.

I am a Software Engineer level III (out of 3 levels) in the Identity team in the SaaS division, which provides Single Sign On (SSO) support to SAML and OIDC applications from a variety of Identity Providers.

I am **in charge of developing** new requirements, enhancements and maintenance efforts of the JumpCloud platform, with a focus on **user interface solutions**.

Technical Stack:

- Vue
- NodeJs
- Python
- Go
- Docker

Full Stack Developer at Clear, Guadalajara

May 2021 — November 2022

Leading company in software development for automotive SMEs, with a presence in over 20 countries.

I was in charge of **developing** new requirements for customers that involve the **connection**, **manipulation** and **display** of data between third-party software with the company products using API's.

Achievements:

- I documented, made wire-frames and develop an airport-like screen for customers to review their order status in the waiting rooms of dealerships.
 - This screen came alongside a mobile version for a customer to review a specific order status when customers are off the dealership.
- I developed a testing environment that emulates a DMS, in order to speed up the testing and production release of new functionalities.

Technical Stack used:

- NodeJs
- AWS
- Typescript
- React
- NextJS

Developer and Project Analyst at Soluciones Sever, Guadalajara

January 2019 — May 2021

Transportation and logistics company, its client portfolio includes Walmart, PISA Laboratories and Kuehne + Nagel.

I was in charge of **managing and providing data** for the portfolio of projects related to information technology, process improvement, cost reduction and international certifications of the company.

Achievements:

- I analyzed different data sources through library and RESTful API's to carry out the planning and execution of various projects that resulted in a 36% reduction in fuel cost and 54% in monthly RPM abuses of the company's fleet of transportation units.
- I led the project to certify the company in the BASC international safety standard
 - I **established** 22 procedures in the IT department of the company.
- I developed a dashboard with cloud computing technologies, which included different key indicators to control daily fuel consumption and productivity of the transport fleet.

Technical Stack used:

- Node.js
- React
- AWS
- Javascript
- Python
- PowerBI

Cofounder at AGRON Solutions, Guadalajara

Start-up whose objective was to provide a soil-testing system on field with predictive analysis.

I was in charge of operations and research and development team. I led the team in the development of the artificial intelligence algorithm for predictive analysis of soil nutrients.

Achievements:

• The project made a **fund-raise** of \$700k USD for the development of the system.

Technical Stack used:

- Node.js
- Javascript
- Python
- R
